

MINI TIPPER

Mini Tipper, a CHIL original design, is a high point dumping rear tipper and is designed to be a part of primary waste collection system. The tipper is designed to dump the waste directly into the road side containers, Garbage Compactors, mini transfer stations or dump sites. CHIL Mini Tipper is ideal for door to door collection and collecting road side spillage. Mini tipper's low turning radius makes it best suited for operations on small roads and congested areas.
